#### **DETAILED ACTION**

#### Claim Objections

1. Claim 5 is objected to because of the following informalities: In line 2 applicant recites "engaged pat of the ". Appropriate correction is required.

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 1-4,6-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Shimichi (JP 11048856) in further view of Nakazawa et al (6,871,989).

Shimichi discloses the claimed invention except for the recitation of the first temporal fastening member having a plurality of engaged parts along a protruding direction of the positioning projection and the second temporal fastening member having an engaging part adapted to engage with the engaged parts provided by the first temporal fastening member. Simishi discloses an outer panel member mounted frame member of a vehicle and defining of an outer surface the vehicle (6); a lamp unit disposed adjacent to said outer panel member (26); a positioning projection protruding from one of said outer panel member and said lamp (32) a positioning opening formed the other one said outer panel member and said lamp unit (40), said positioning adapted to receive said positioning projection (fig 4); positioning abutment parts

•

Art Unit: 2875

provided in said lamp unit and said outer panel member, and said positioning abutment parts abut one another when said positioning projection has been inserted into said positioning hole(38,40), thereby position lamp at a predetermined location along protruding direction said positioning projection; a first temporal fastening member protruding from one of said lamp(34) unit and said frame member, and having an engaging part formed along protruding direction said positioning projection(34h); and a second temporal fastening member provided in the other one said lamp unit and said frame member (44), and having an engaging part(44c) adapted to engage the part provided in said temporal first temporal fastening member, the positioning projection is tapered toward a tip thereof. Hashigaya discloses a fastening member having a plurality of engaged parts formed along the protruding direction of the positioning projection (34a, 34b, fig 7) and a second fastening member provided and having an engaging part adapted to engage with the engaged parts provided in the first fastening member (50, 50a, fig 7). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have modify the device of Shimichi to include Hashigaya's teaching of a fastening member having a plurality of positioning projections since as taught by Hashiyaga such a modification is purposeful to facilitate retention of the positioning projection within an orifice.

Page 3

 With regards to claim 2, Shimichi discloses a first temporal fastening member being a shaft like (fig 6, 34) member having a projection (34h) formed on an outer circumference thereof in a manner extending along a circumferential direction thereof, at least in an upper potion. With regards to the member having Application/Control Number: 10/667,372 Page 4

Art Unit: 2875

a plurality of projections formed on the outer circumference direction, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have a plurality of positioning projections in the device of Shimichi for the purpose of providing fastening member of Shimichi with reinforced retaining strength. Furthermore, it has been held that mere duplication of essential working parts of a device involves only routine skill in the art. *St. Regis Paper Co. v. Bemis Co.*, 193 USPQ 8;

- With regards to claim 3, Shimichi discloses a second temporal fastening member including an annular member having engaging parts (figs 4 and 6, 41g) adapted to engage with the projection of the first temporal fastening member. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have the second temporal fastening member of Shimichi include engaging parts adapted to engage with multiple projections of the first temporal fastening member since a second temporal fastening member with a plurality of engaging parts to engage the plurality of fastening members from a first member would be purposeful providing the lamp apparatus with a reinforced retaining strength for retaining the lamp housing to the frame member of the vehicle.
- The second temporal fastening member is a clip (pp4, 0024, of translation)
- The clip includes a frame part (44c) and extending parts (44);
- With regards to the frame member being rectangular, it would have been obvious
  to one of ordinary skill in the art at the time the invention was made for the frame
  member of Shimichi to be rectangular, since it has been held by the courts that a

Art Unit: 2875

change in shape or configuration, without any criticality, is nothing more than one of numerous shapes that one of ordinary skill in the art will find obvious to provide based on the suitability for the intended final application. See *In re Dailey*, 149 USPQ 47 (CCPA 1976). It appears that the disclosed device would perform equally well shaped as disclosed by Shimichi.

### Allowable Subject Matter

- 3. Claims 5 and 9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
- 4. The following is a statement of reasons for the indication of allowable subject matter: The prior art cited of record does not teach the engaged part includes two parts, which oppose each other.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Anabel M. Ton whose telephone number is (571) 272-2382. The examiner can normally be reached on 08:00-16:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Sandra O'Shea can be reached on (571) 272-2378. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
